- with a **Bluetooth** module for Android and iOS.
- *Smiths style Dashboard*; real life data.
- *Lucas style*; 23D, 25D, 43D, 45D, 59D, 35D8

## Programmable distributor for your classic car

The CSI-Pro-Ignition is a programmable distributor for your (British) Classic Car, you can adjust and program the advance curves yourself.

Two selectable presets (modes) can be programmed, each with its own rpm and vacuum curve plus various other settings such as:

- speed limiter
- maximum total advance
- and minimum rpm speed for activating the vacuum advance.

**Edit and Write curves,  
even while the engine is running!**

Furthermore, the CSI-PRO-Ignition has the unique possibility to write the curves and other settings to the distributor, even while the engine is running, and to have the changes take effect immediately!

The static setting (offset of 0 degrees) can also be shifted in steps of 1 degree, up to 10 degrees positive and up to 10 degrees negative, without having to rotate the distributor itself. An acceleration timer measures the time between 2 preset speeds to measure and compare the engine's performance. An external switch can be used for switching between the 2 modes.

**Suitable for smartphone and laptops**

The CSI-Pro-Ignition can be connected either a USB or a Bluetooth module, so that programming can be done on a laptop or on a smartphone . Free software is provided for Window, Android and iOS.
